

When Corporations Leave Town: The Costs and Benefits of Metropolitan Job Sprawl

New suburban communities have sprung up all over America, while industrial plants and other commercial districts in the inner city have been left to decay. Nowhere is this more evident than in the midwestern United States, where newly formed communities have funneled jobs and income from the inner city. Generally known as sprawl, the problem is particularly acute in those metropolitan areas where deconcentration is taking place—decline in the central city coupled with suburban growth. This process creates benefits in the suburbs, but also increasingly poses costs in the form of congestion and increased infrastructure costs. *When Corporations Leave Town* analyzes and develops a consistent and comprehensive cost-benefit analysis of employment deconcentration, focusing on central cities and their suburbs. Sprawl and deconcentration have become big issues in Vice President Albert Gore's presidential campaign, and are the subject of a growing number of policy initiatives, conferences, and research efforts by organizations such as the Urban Land Institute, the National Homebuilders Association, and the Brookings Institute. Joseph Persky and Wim Wiewel compare the costs and benefits of a firm locating in the central city with locating in the suburbs. They use a hypothetical model of a large manufacturing plant and a business services office in the Chicago metropolitan area to calculate tangible and intangible costs such as population and traffic congestion, air pollution, housing abandonment, loss of farmland, tax liabilities, and the strain put on suburban public resources. Persky and Wiewel then explore a broad range of public policies advocated for reversing or mitigating metropolitan deconcentration.

Trail Posted by erin on April 25, 2011 3 comments The Alchemical Garden site February 2010 GAL is turning a desolate field of weeds into a visually compelling garden that will educate and engage the community for years to come. Located on a 160 x 25 site near the south entrance of Newburyports Clipper City Rail Trail, the Alchemical Garden is a richly layered evolving art and horticulture experience that is accessible on many different levels to the public. Alchemical Garden Plot plan Alchemical Garden is designed to become a model for a sustainable, interactive public garden through the use of symbiotic, low maintenance plantings and recycled materials. The ancient discipline of Alchemy marries art and science and is famously known for transforming a common material into gold. The Alchemical Garden will lead the community to transform on a number of levels : Alchemical Garden with Spring Wheat "Crop Circles" June, 2011 BUILD COMMUNITY: The Garden creates a gathering space for individuals to form a more intimate relationship with their community. The space is designed with visual features and seating areas to compel passers-by to pause, reflect, and have a multi-sensory interactive experience (sight, smell, touch, taste, smell) with the garden and the community.
