

Landuse And Landcover Studies In Microwatershed: A Remote Sensing And Gis Approach

The development in science of imaging, especially in the field of Remote Sensing (RS) and Geographical Information System (GIS), has provided a very strong base for monitoring and carrying out various conservative projects. Vegetation mapping with the help of remote sensing is one of the useful information in environmental planning. Remotely sensed data is used for the generation of various resource maps like landuse/ land cover, surface water resources, drainage, ground water prospects, soils etc. these databases are integrated in GIS to generate specific recommendation for land and water resources development on watershed basis. The book emphasis the study in Awangkhujaik microwatershed (Senapati District, Manipur, India) for the identification and evaluation of landuse/ land cover using remote sensing and GIS tools. Various information relating to anthropogenic activities responsible for the current change in landuse pattern are discussed which may help in recommending the future management programmes. The book will help in creating awareness among the academia and various stake holders about the application of remote sensing and GIS in the studies of microwatershed.

Green Artists League GALvanizing Eco-Responsibility Subscribe via RSS HOME ABOUT ALCHEMICAL GARDEN ECOVENTIONS Help Cultivate The Alchemical Garden: An Edible Garden and Art Park at Newburyport's Rail Trail Posted by erin on April 25, 2011 3 comments The Alchemical Garden site February 2010 GAL is turning a desolate field of weeds into a visually compelling garden that will educate and engage the community for years to come. Located on a 160 x 25 site near the south entrance of Newburyports Clipper City Rail Trail, the Alchemical Garden is a richly layered evolving art and horticulture experience that is accessible on many different levels to the public. Alchemical Garden Plot plan Alchemical Garden is designed to become a model for a sustainable, interactive public garden through the use of symbiotic, low maintenance plantings and recycled materials. The ancient discipline of Alchemy marries art and science and is famously known for transforming a common material into gold. The Alchemical Garden will lead the community to transform on a number of levels : Alchemical Garden with Spring Wheat "Crop Circles" June, 2011 BUILD COMMUNITY: The Garden creates a gathering space for individuals to form a more intimate relationship with their community. The space is designed with visual features and seating areas to compel passers-by to pause, reflect, and have a multi-sensory interactive experience (sight, smell, touch, taste, smell) with the garden and the community.
